A few things which make for successful gardens

**NUVIDA FERTILIZER.** No garden can long produce a good crop of fine flowers or vegetables without at least an occasional application of good plant food. Roses, shrubs, vines, and trees soon lose their healthy green lustre when left too long without fertilizer. Nuvida Plant Food is a clean, odorless material, quick in action and a complete food for lawns, shrubs, flowers, etc. See page 69.

**GROBARK.** Here is an item that is unexcelled as a pruning, grafting and budding compound that will actually grow new bark over wounds on a tree or shrub. Will stop die-back on roses. See page 92-B.

**PEST CONTROL.** Spraying at the proper time and with the right materials will prevent a good share of the troubles which from time to time beset the garden. Germain’s Spray Chart will be found on pages 46 and 47.

**GERMACO HOTKAPS.** These miniature hothouses are used in great quantity by commercial growers. They are equally valuable to home gardeners for the protection of seeds and young plants in early spring. See page 55.

**E-Z FERTILIZER SPREADER.** A new and very inexpensive device for the uniform spreading of commercial fertilizer. Does a better job and saves fertilizer. See pages 69 and 92-A.
The Germain Seed & Plant Company gives no warranty express or implied, as to description, quality, productiveness, or any other matter of seeds, bulbs, plants or trees they send out, and they will not be responsible in any way for the crop.

**BLETIA (Bletilla)**
The Rare Chinese Garden Orchid
From China comes this fascinating and exotic gem among flowers. A true orchid, yet perfectly at home in the soil of our California gardens. Not all Orchids require the moss and peat usually associated with their culture, a few naturally grow in the soil and the Chinese Garden Orchid is one of the most charming among them. Planted in good loamy soil they quickly establish themselves and soon make large clumps, blooming freely in spring and early summer. They do well in sun or partial shade. The orchid shaped flowers are an exquisite mauve-violet in color and are lovely in corsages, small vases or table decorations

Use NITRAGIN and Increase Your Tonnage

Inoculation of Alfalfa and other legume seeds with NITRAGIN is of great importance to growers. All legumes require a great deal of nitrogen. If the nodules on the roots are not there in quantity, the plant uses nitrogen from the soil instead of taking the nitrogen from the air placing it in the soil.

NITRAGIN is a soil-like substance containing millions of nodule forming bacteria which draw nitrogen from the air and give it to the plant.

Inoculate your Alfalfa Seed and other legumes. It only costs $3.50 per acre.

When ordering please specify crop to be used on.

GERMAIN'S FIELD AND ENSIAGE CORN

Note—Prices on field corns listed below are postpaid in quantities up to and including 10 pounds. If larger quantities are desired, corn, field corn should be drilled in rows three feet apart, and two feet apart in the rows, requiring 50 to 75 pounds to the acre.

HYBRID FIELD AND ENSIAGE CORNS

We are very glad to be able to offer this year, Hybrid Field and Ensilage Corns that have been developed in Idaho for western conditions. Yields have averaged from 15 to 20 bushels of corn per acre over open pollinated varieties. Growers are cautioned not to attempt to save hybrid corn seed as the hybridization work must be repeated each year. We list hereunder two varieties, one recommended for ensilage and one for grain.

HYBRID ENSIAGE CORN NO. 520—This Yellow Dent Corn is an extremely heavy producer of silage. It comes in tassel in about 97 days and is ready for husking in about 110 days. 1 lb. 30c; 10 lbs. $2.50 postpaid.

DOUBLE CROSS HYBRID NO. 470—We recommend this hybrid corn for planting for grain. It is a yellow dent variety and is about a 90 day corn. 1 lb. 30c; 10 lbs. $2.50 postpaid.

Semesan Jr. should be used to disinfect seed corn before planting, to destroy such disease germs and fungus spores as adhere to the surface coat or in some cases exist internally. Semesan Jr. possesses remarkable properties. After disinfecting seeds, accelerates germination, stimulates growth, influences earlier maturity, develops sturdier plants, and increases crop yields. See page 47 for prices.

CORN—FIELD—Open Pollinated

BIG JIM CORN—One of the heaviest yielders grown in California, both for grain and silage. Kernels rich yellow and very large, ears 10 to 14 inches long and cob small. Our recommendation as the best field and ensilage corn for the Southwest. Price 1 lb. 25c; 10 lbs. $2.00, postpaid.

HICKORY KING, WHITE—This corn is entirely distinct from all other varieties, having large kernels with a small cob. Price per lb. 25c; 10 lbs. $2.00, postpaid.

ENSEILAGE CORN

ORANGE COUNTY PROLIFIC—Orange County Prolific is a California product of the white dent variety. It is an exceptionally heavy yielder and highly recommended for ensilage purposes. Price per lb. 25c; 10 lbs. $2.00, postpaid.

KING PHILIP, YELLOW—This is a hard yellow flint corn and is generally referred to as ninety-day corn. It is drought resistant and will give a fair yield where most corns are a failure. Price per lb. 25c; 10 lbs. $2.00, postpaid.

GERMAIN'S SORGHUMS AND SUDAN

SACCHARINIE SORGHUMS

EARLY AMBER—Furnishes most nutritious forage, which can be fed either green or cured, and will yield two or three cuttings a year, stooling out thicker each time it is cut. It grows ten to twelve feet high. Sow broadcast for forage at the rate of 5 lbs. per acre in drills 3½ to 4 ft. apart. Price per lb. 25c; 10 lbs. $2.00, postpaid.

HONEY SORGHUM—For ensilage and for syrup purposes. It is a fine variety for silage purposes, having slender leaf stalks, and is widely grown from eight to twelve feet. It is medium late maturing and has decidedly tender stalks, and is important from a forage standpoint. When the crop is to be used for fodder or silage, it is usually planted in rows 2 to 3½ feet apart, using up to 5 lbs. of seed per acre. Price per lb. 25c; 10 lb. lots $2.00, postpaid. Write for special prices in larger quantities.

NON-SACCHARINIE SORGHUMS

DWARF MILO MAIZE—Grows to a uniform height of 4½ to 5 feet; its stalks being a mass of leaves overlapping each other and under average conditions yielding from 2 to 2½ tons of threshed grain per acre. It is drought resisting, a vigorous producer, easy to harvest and is the finest grain we know. Plant six pounds per acre in rows 3 feet apart and plant six to twelve inches apart in a row. Planting should be done in the spring, after all danger of frost is past and the ground is warm. Price per lb. 25c; 10 lbs. $2.00, postpaid; 25 lbs. $4.00.

(Write us for Quality Prices and Samples)

DOUBLE DWARF MILO MAIZE—(Cal-approved— Seed ready for planting to the Dwarf Milo Maize except in height. This strain grows 2 to 2½ feet tall and therefore can be combined. Planting instructions are the same as the Dwarf Milo Maize. We offer this strain "Cal-Approved" seed of this variety. "Cal-Approved" seed must meet rigid standards of purity in type, uniformity, and germination in order to meet the requirements of the State Department of Agriculture. Price per lb. 25c; 10 lbs. $2.00; 25 lbs. $4.00, postpaid.

DOUBLE DWARF MILO MAIZE NO. 38 (CAL-APPROVED)—It is introduced through the "CalApproved" program of the University of California. It is resistant to Pythium root root and therefore should be planted where this disease is a problem. Price per lb. 25c; 10 lbs. $2.00; 25 lbs. $4.00, postpaid.

FETERITA—An early maturing plant valued both for grain and forage. It resembles Milo in habit, except that the heads are uniformly erect, seeds bluish white in color. Sow 6 pounds to the acre. Price per lb. 25c; 10 lbs. $2.00, postpaid.

WHITE KAFFIR—Unsurpassed for dry alkali land, on which no better fodder and grain crops grows. A prolific member of the sorghum family, having more coarse and smaller stalks than the other varieties, and harvested very easily. Its great root system enables it to produce wonderfully in drought conditions and to break up new ground for other crops. Cattle relish the stover as a food for poultry. Plant six pounds to the acre. Price per lb. 25c; 10 lbs. $2.00, postpaid.

HEGARI—The seed is round and white and does not shatter very readily. The heads grow very erect. It is drought resisting and stands some alkali. Plant six pounds to the acre. Price per lb. 25c; 10 lbs. $2.00, postpaid.

WONDER FORAGE PLANT—A very heavy yielder due to its habit of stooling. The stems are succulent and sweet. Plant five lbs. drilled, twenty lbs. broadcast, to the acre. Price per lb. 35c; 10 lbs. $3.00.

EGYPTIAN CORN—The grain is produced in large compact heads and the seed is flat and pure white. Plant the same as Milo Maize. Price per lb. 25c; 10 lbs. $2.00, postpaid.

SUDAN

SUDAN GRASS—Grows on a wide range of soils from sand to clay, and produces from four to six cuttings of highly nutritious hay per acre. As a pasture crop it is unexcelled, and succeeds where others fail. Sow 15 to 20 lbs. of seed per acre in the early spring after all danger of frost is past, and you will be assured a bountiful supply of forage until late fall. Price per lb. 25c; 10 lbs. $2.00, postpaid.

SUDAN GRASS, CALAPPROVED NO. 23—We advise growers of Sudan to plant this new improved strain. Developed by the University of California, it has yielded on actual test 20% more than ordinary Sudan, and in addition is much more uniform in its growth. This seed is grown under the "CalApproved" plan of the State Department of Agriculture, which means that it must meet the most exacting standards of type, uniformity, and freedom from weed seeds. Price per lb. 25c; 10 lbs. $2.00, postpaid.

“Mum’s” the word in 1941! The Chrysanthemum covers such a wide range of colors, types and sizes, produces such a wealth of bloom—no wonder it is known as the “Queen of Autumn!” From the large Japanese type, through the Korean Hybrids, Feathery Class, and Pompons, you will find every desirable form or color for your fall garden. All Germain’s plants are propagated from strong soft wood cuttings and established in 2½-inch pots. We do not advise planting too early as this makes them take an inclination to become hard and woody long before flowering season begins. “Mum” plants are ready for shipment April 15th. Please add 10% of the amount of the order for postage if ordered shipped by parcel post.

NEW KOREAN HYBRIDS

In a class by themselves are these new early flowering Chrysanthemuses. They offer color, charm, abundance and supremely easy culture. These new creations suggest the Gerbera in type and color and are enhanced by Chrysanthemum characteristics. They prove very valuable as cut flowers for miniature decorations. Cut with their entire branching sprays, they offer hundreds of blossoms on a single branching stem. A “must” for your garden.

Use CYANOGAS in accordance with these simple directions and watch the ants die. CYANOGAS kills them before your eyes, quickly, cheaply and surely, without any fuss or bother—they don't have to eat it or even touch it—the gas kills them.

GARDEN AND LAWN ANTS
Merely place pinch of CYANOGAS in the opening sufficient to close. A pencil or pointed stick may be used to enlarge the opening.

LITTLE BROWN (STINGING) ANTS; FIRE ANTS
Locate and uproot nests with hose. Sprinkle CYANOGAS A-Dust on ground and cover with layer of soil.

SMALL GARDEN PLOTS
In small areas, where time is an important consideration, it may be advisable to treat the entire space with CYANOGAS. Dig a trench across one end of the plot. Sprinkle CYANOGAS (Granular) into a little of the trench at a time. Cover immediately with earth dug from the next trench. Proceed in this way until the entire plot is treated. Use 1 pound of CYANOGAS to 100 square feet.

Be sure to cover the CYANOGAS immediately so as to conserve the gas in the soil.

INFESTED PLANTS
If growing plants are being annoyed by wireworms, use those plants as a bait crop. Put a teaspoonful of CYANOGAS 2 or 3 inches deep close to each plant that is beginning to wilt. This will kill the wireworms which have gathered near the plant and will also kill the plant. It is advisable to wait a week before replanting the treated soil.

The gas given off by CYANOGAS is the most powerful insect poison known, reaches all parts of the ant hill or nest and kills the ants instantly. The residue, after the gas is given off, is slaked lime and is not poisonous.

A berry twice the size of the Youngberry (by actual count it took 35 Boysenberries per basket while the Youngberry needed 70 to fill)—a berry that has the succulence and flavor of the best Blackberry you ever ate together with the tang of the Raspberry and a suggestion of the Loganberry. Whether eaten fresh, canned, in jam or jelly, or in pies and tarts it is absolutely superior in every way to any other berry grown.

THORNLESS LOGANBERRY
(Plant Pat. No. 82)
Another season’s experience simply proves the claims made for this late introduction. For the home garden or the grower it ranks appreciably higher than the common Loganberry. Three points of difference stand out. It is earlier, produces over a longer period, and is more prolific. In addition it makes stronger canes and more vigorous plants. The berries are larger with the same tang and flavor and the vines are ABSOLUTELY THORNLESS.

Dorsett Strawberry
Strawberry—“DORSETT”
The Dorsett is very productive, early and of very large size. The quality is very good, being firm, of good appearance, a splendid keeper and superior in flavor to most other berries. For home use, if you contemplate planting only one Strawberry variety, then it should be Dorsett.
Prices Prepaid—25 for 75c, 50 for $1.25, 100 for $2.00; 1000 for $8.00

Boysenberry
Dorsett Strawberry
Raspberry "Yellow Honeysweet"
New Non-puckering JUMBU PERSIMMON
A new, non-puckery, large fruited Persimmon. Somewhat similar to Fuyu but much larger and is the finest and largest non-astringent Persimmon. The fruit is good to eat either hard or soft after it has begun to color. 4 to 6 foot trees, $1.35; 10 for $12.50.

Sweet, Juicy, ROBERTSON NAVAL ORANGE
Similar in appearance and equal in color, tenderness, flavor and juiciness to the finest Washington Navel, the new Robertson Navel Orange is outstanding for its remarkable habit of bearing enormous crops year after year.
Of distinct value and probably the principal reason for its heavy yield is the fact that the Robertson gains so rapidly in size that in June and July when hot weather comes on the fruit is so large that it is not affected by “June drop” while the Washington Navel drops to an appreciable extent. For home planting there is no finer winter orange.
The Robertson Navel is protected by U. S. Plant Patent No. 126. Every tree sold carries a tag bearing this number and unless it does carry such a tag it is not a genuine Robertson.
Prices: Two-year trees, $1.75 each; 10 for $15.00

THE MEYER DWARF LEMON
Originating in China, this semi-dwarf Lemon is being extensively planted throughout most of California because it is quite hardy, much more so than any other lemon. The tree starts to bear shortly after planting, producing large oval fruit of excellent appearance and quality. The fruit is identical in its uses with any other lemon—for flavoring, pies, drinks, etc.
Two-year trees, $2.25 each; 10 for $20.00
Gallon Containers, 75c each

Luscious GOLDEN BLUSH PEACH
Another of the new varieties particularly adapted to Southern California due to its ability to produce a crop even when preceded by a warm winter. The beautiful big fruits, slightly more elongated than round, are beautifully blushed with red, and in flavor and juiciness Golden Blush far exceeds the better known J. H. Hale or Elberta. Fruit is large, yellow, and can be recommended as a splendid home peach. August.
4.6 foot trees 85c each; 10 for $7.50

Flavorful BABCOCK PEACH
The most important feature of the Babcock is that it will bear a crop every year regardless of winter temperatures. Most Peaches, whenever we have a very mild winter, react unfavorably and do not set a normal crop. Babcock ripens early, in the latter part of June, is white fleshed, free-stone, has a beautiful red cheek, and is of exceptionally high quality; being sweet, juicy and richly flavored.
4 to 6 foot trees, 65c each; 10 for $6.50
3 to 4 foot trees, 55c each; 10 for $4.50.
Crisp. Delicious VALMORE APPLE
The big round fruit of Valmore is magnificently colored, with the underlying golden yellow color, striped and blotched with scarlet and yellow on one cheek. Valmore is deliciously flavored, sweet and juicy, making delicious apple sauce and apple pie. Since it is the only red-cheeked apple that we can definitely recommend for the lower altitudes of Southern California, we suggest including it with every home planting where an apple is needed. U. S. Plant Patent No. 238. 3 to 4 ft. 80c each; 4 to 6 ft. 90c each.

Big Blood-Red MARIPOSA PLUM
Plant Patent No. 111
A new Blood Plum so much of an improvement over the Satsuma that, you can rest assured, it will rapidly supplant that old favorite. Large, round, and maroon red fruit—deep red flesh all the way through, honey-like sweet, and with abundant juice, yet quite firm. Truly a fruit of magnificent flavor with no bitterness to either skin or pit. 3 to 4 ft. 70c each; 4 to 6 ft. 80c each.

C. O. SMITH PEACH
THE IDEAL HOME GARDEN VARIETY
It produces a crop regularly and is not subject to the delayed foliation common to other varieties in our mild climate resulting in a loss of crop. Larger and somewhat later than the Babcock with richly flavored and juicy white flesh.
4 to 6 foot 65c each; 10 for $5.50. 3 to 4 foot 55c; 10 for $4.50

The New ROYAL GOLD APRICOT
Probably as fine an addition to the fruit tree list as any that has been introduced in the past few years. A sport of the Royal variety it has the distinct advantage of being the first apricot on the market with the same size, quality, and sweetness as the Royal. It will come in bearing in May with a heavy crop of the most delicious apricots you have ever eaten.
4 to 6 foot 75c each; 10 for $6.50 3 to 4 foot 65c each; 10 for $5.50

THE LAMBERT CHERRY
The latest in the family of cherries for Southern California. Probably the largest of the deep red varieties and in the writer's estimation the best tasting of all. Sweet, juicy, plump, meaty, you know you're eating something when you taste the fruit of the Lambert.
4 to 6 trees 65c each

ROYAL GOLD APRICOT

NEW PARADISE ASPARAGUS
For Greater Yield
and
Unusually Mild Flavor
The introduction of Paradise asparagus marks the greatest advancement in asparagus since the Washington varieties were introduced several years ago. The biggest factors in favor of Paradise are that it produces much heavier crops and the flavor is greatly improved. If you are raising asparagus for profit, you should investigate this variety, for if you can double your tonnage with no more expense than a little additional for plants, you can easily see what it will do to your profits.
Plant Paradise and get more and better asparagus, from the same space and with less effort.
Prices: 10 for 50c; 25 for $1.00; 100 for $2.50; 1000 for $16.00, postpaid.

All-America Rose Selections are grown in fourteen official test gardens over the country. Each is under the care and all-season judgment of an accredited Rose judge and grower, who watches the half dozen plants of each entry or trial through one whole year and the following spring and summer blooming periods, a so-called two-year test. Highest scoring kinds, averaged over the two-year period in all the test gardens, are recommended by the Rose Council for All-America introduction.

The war has prevented the shipping and planting of many spring-flowering bulbs, including most of the tulips, hyacinths and crocus, which we rely on for garden color. Many others are in short supply. But Roses will bloom in the spring, the summer and fall, as well as in seasons to come. And, here are the new ones, glamorous and beautiful.

The extremely long, pointed buds of spectrum-red, open to flowers of spectrum-red with a yellow base. The plants have abundant, very mildew-resistant foliage and are extremely vigorous and free-branching. The unbelievably long buds open to flowers varying in size from 3½ inches to as much as 6 inches in diameter. The open flowers are unusual not only because of their brilliant coloring but because the petals are edged with a silver line and in the center of the flower are arched first inward and then outward in such a unique fashion that the flower has a very high centered appearance and seems to have more petals than are actually present in the flower. There are usually 30 to 35 petals. The flowers last nearly as long when cut full blown as they do in the bud stage—a period of several days' time.
